Architectural

I-Sign was developed to create the ultimate frame for architectural way finding solutions and interior decoration applications. I-Sign is a co-development between Cosign and the renowned Belgian designer Bart Bauwens - IDnA.

Design

I-Sign combines simplicity, power and a certain ineffable grace of design. The 2,5mm visible edge gives the I-Sign a sophisticated modern look. Graphics and panels can be inserted and mounted without any visible fixtures.

Uniformity

I-Sign enables you to create a uniform system throughout the building maintaining the same look and feel for your indoor way finding, doorplates and directories, evacuation plans and pictograms but also for your interior decoration.

Multifunctional

I-Sign is available as a wall mounted, suspended or projected sign, both single and double sided, and with the I-Sign Display it is also possible to create illuminated signs, light boxes and interior totems.

FLEX

I-Sign Flex is a ready-made, spring loaded flexible sign system, which can be installed and updated in seconds, making it perfect for environments that require regular sign updates (eg. hospitals, schools, offices...).

- 1 The anti-reflective acrylic cover is flush with the top of the aluminum frame giving the I-Sign a sleek look.
- 2 Inserts can be replaced easily after removing the acrylic cover with a vacuum cup and the help of an ingenious, patented spring mechanism.
- 3 To wall mount an I-Sign double sided tape or adjustable wall mount buttons can be used.
- 4 To prevent unauthorized changing of inserts and make the I-Sign vandal proof, the frame is equipped with a locking function.

FIX

I-Sign Fix offers the perfect solution for signs which don't require regular updates (eg. evacuation plans, safety signs and other pictograms) and where a high degree of customization in materials used or graphics applied is needed.

1

2

3

4

1 Elegant frame without visible fixtures.

2 panels in different materials with a 2-3mm thickness can be used: engraving sheets, panels with braille or tactile letters, aluminium composite panels, metal, glass, acrylic, wood, ...

3 An innovative clip with double sided tape is used to mount the panels inside the frame. The position of the clip can be altered allowing 2mm or 3mm panels to be inserted but still making sure the panels are flush with the top of the aluminium frame.

4 to wall mount an I-Sign Fix double sided tape or screws can be used.

DISPLAY

I-Sign Display is the perfect solution for edge-to-edge frames or displays. Maintaining the same elegant I-Sign look this system is used for framing big sized panels, digital prints, artwork, making it extremely suitable for musea, galleries and interior decoration applications. In a double sided version the I-Sign Display profiles can be used to create the ultimate light box, suitable for airports, shopping centra, ...

- 1 Elegant but sturdy frame for big sized applications without visible fixtures, hiding the unfinished edges of the panels used.
- 2 Easy to mount with special corner connectors. Panels are installed using double sided tape, magnetic/steel tape or reclosable Dual Lock™.
- 3 Together with the new generation LED modules (eg. SloanLED's PosterBox Slim) one can create narrow light boxes without having to use light guided plates, thus providing both an easy and economical solution.
- 4 it is possible to create stylish (non-)illuminated interior totems.
